Manual Vacuum Aspiration (MVA) for uterine evacuation under local anaesthesia

MVA for surgical management of miscarriage, fetal demise and T.O.P

- 98% effective
- Suitable from 5 to 12 weeks gestation
- May be carried out in OPD setting, freeing theatre for other cases
- May be used with Local Anaesthesia
- Easier identification of gestational sac to confirm evacuation
- Economical – theatre time estimated at £3,000+ per hour

**Ipas Manual Aspirator**

Patented locking valve system allows creation of vacuum prior to beginning the procedure, and finger-tip control of vacuum during the procedure.
